Title Slide

First Slide of Section

```
> npm install -g @angular/cli@1.3.2
```

- This command-line interface creates and maintains Angular projects
- All projects are created as **npm** modules
- The projects use a standard package management system built-in to **package.json**

Second slide of section - sample

Using *styles* allows components to embed styles in a multi-line string

```
@Component({
    styles: [
      `h1 { color: green; }`
    ]
})
```

By default, Angular attempts to tag these styles with prefixes to namespace them to the component
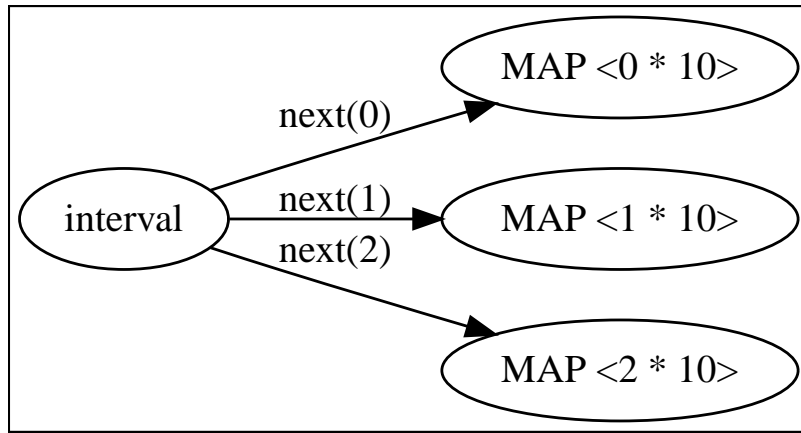

```
@Component({
  // default...
  encapsulation: ViewEncapsulation.Emulated
})
```

Testing graphs with graphviz

- Data emitted, element by element, from a series of timed events

```
let countByTens =
    Observable.interval(500) // every 1/2 second
              .map((counter) => counter * 10);

countByTens.subscribe((value) => { console.log(value) });
// 0, 10, 20, 30, 40, 50
```

- Observable Output
